

CLAIMS

1. A device for removing earwax which adheres to a signal outputting portion of a hearing aid, comprising:
 - a case; and
 - a brush provided in the case.
2. A device for removing earwax which adheres to a signal outputting portion of a hearing aid, comprising:
 - a case;
 - a brush provided in the case, and
 - a liquid retaining member for retaining a cleaning liquid also provided in a case.
3. The device according to claim 2, wherein the brush and the liquid retaining member are provided in different cases or in a single case.
4. The device according to claim 2, wherein the case in which the brush is provided forms an upper case and the case in which the liquid retaining member is provided forms a lower case so as to become a unitary case.
5. A device for removing earwax which adheres to a signal outputting portion of a hearing aid, comprising:
 - a case;
 - a brush provided in the case, and
 - a liquid retaining member for retaining a cleaning liquid provided in the case, wherein the brush is comprised of a hair structure arranged on the liquid retaining member.
6. The device according to claim 1, 2, or 5, wherein the case in which the brush is

provided is fixed to an vibration driving means so as to undergo vibration, rotating movement, reciprocating movement or two-dimensional movement.

7. The device according to claim 1, 2, or 5, wherein the device further comprises a hearing aid drying case or a hearing aid carrying case.

8. A device for removing earwax which adheres to a signal outputting portion of a hearing aid, comprising:

a case which is constructed of a case body and a lid, and
a brush which is provided in at least one of the case body and the lid.

9. The device according to claim 8, wherein an anti-slip member is provided on at least one of the outer top surface of the lid and the outer bottom surface of the case body.

10. The device according to claim 8 or 9, wherein an anti-slip member is provided on the outer peripheral surface of the case body.

11. The device according to claim 8, 9, or 10, wherein the case body is divided into a brush accommodating section and a cleaning member accommodating section.
